

Parallel Session 3: Sub-theme 5

Adoption & Impact

- Comparison of 5 dairy production systems – Intensively managed system came out most profitable & environmentally friendly
- Targets set to reduce food waste by 50% by 2030 Will be achieved by recycling through AD plant & redistribution of compost locally
- Milk price bonus paid to producers to improve manure management (Argentina & Chile).

Parallel Session 3: Sub-theme 5

Adoption & Impact

- Posters
 - No. 98
 - Nutrient regulations vary widely across the countries represented by RAMIRAN
 - No. 99
 - Finland have a large manure data base that can support enhanced manure use from policy making to practical farming
 - No. 100
 - Recycled composted manure is a key nutrient source on organic beef farming systems
